Authorised distributor

Flexiteek is an international registered trade mark owning patents in many countries.  
For patent updates please see our website [www.flexiteek.com](http://www.flexiteek.com)

**Flexiteek is a composite PVC** based marine decking system that looks and feels like a high quality teak deck.

Flexiteek is by far the most practical and convincing alternative to expensive teak decking. Extensive testing has been carried out in tropical and European conditions and Flexiteek continues to clean easily and look like a freshly sanded teak deck.

The Flexiteek system has stood the test of time; cruise ships, super yachts, recreational vessels and RIBs are all enjoying the benefits of Flexiteek decks.

If you want your decks to look the best they can, and you would rather spend more time enjoying your boat than maintaining it, give us a call for more information.

# “If in a moment of insanity, I ever design and build another boat, there is nothing else I would consider using on my decks”

Tried & Tested – Motor Boat and Yachting Magazine 04.04

**Flexiteek is supplied** ready to lay. All our decks are custom made from templates for each project. We supply them in one piece ready to glue down, complete with margins, hatches and deck details.

**All the good** looks and appeal of a freshly sanded teak deck. Although it looks like teak, it is highly resistant to your common spills such as oil, fuel, red wine, fish blood etc. Decks are available with black or white caulking.

**Colour is as natural** as wood with a grain structure throughout its thickness. It is sanded in the same way as wood resulting in a natural wood finish.

**Flexiteek does not** require sealing or difficult ongoing maintenance. A gentle sand once in a while will refresh your deck and remove any stubborn stains.

**Excellent non-slip** surface. Wet or dry Flexiteek provides amazing grip in the toughest conditions.

**UV Resistant.** Flexiteek has been tested to ASTM G 154-00 and is successfully used in the harsh environments of the Australian and Caribbean tropics.

**Installers.** Flexiteek is supplied custom made to the exact shape of your deck and can be installed by one of our installers or delivered to you for

fitting. The decks are glued to your boat with a polymer adhesive that creates a permanent, flexible bond. No screws are used that can leak. Installation instructions are included, a practical knowledge of preparing a finished surface and the ability to follow procedures will get the job done.

**Easy to clean** and maintain. Soap and water makes removal of most spills easy, you can also use a power wash without damaging your deck. Flexiteek may go darker over time and a gentle sand will return it to the original finish.

**Flexiteek has significant** advantages over a wooden deck.

- Easy to maintain
- Does not go grey
- Stain resistant
- UV resistant
- Cost effective
- Fast installation
- Impact resistant

**Flexiteek has grown** into a global company with distributors in over 35 countries and fully owned manufacturing facilities in Sweden, USA and Australia.

For further information on how you can get a Flexiteek deck for your boat, please contact us: [www.flexiteek.com](http://www.flexiteek.com)

“Synthetic Flexiteek rather than teak on the cockpit seats is an excellent and well-timed solution that provides outstanding non-skid properties” The Norwegian sailing journal “SEIL magasinet” test of Hunter 33 in the February 2006 issue
